

# CAPAMP

Conversion Documentation

for the Integrated Management Branch

July 1991

## A. INTRODUCTION

This documentation was provided to help assist the Ministry of Environment with the background required for the conversion of their current CAPAMP DMRS data. For convenience, this document has been divided into 7 sections which includes; a description of the input backup tape directory; the actual detailed BACKUP tape(s) listing; the project spreadsheets indicating block or byte sizes for each request; ASCII Schema and Data file examples; a description of the routines used to convert from a DMRS data base entities to ASCII format; and a listing of all previous project\_related archive tapes.

## B. DIRECTORY STRUCTURE OF THE BACKUP TAPE(S) SUPPLIED

Three (3) separate sets of tapes were provided to Ministry of Environment. This consisted of one set for the Integrated Management Branch (IMB) data; a second set for the Recreational Fisheries Branch (RFB) Terrain data; and a third set for the Wildlife Branch (WLD) data.

An example of your project\_related tape directory structure for the tape(s) supplied is identified as follows:

```
[IMB.CWKAGZ.DATA] ..... [branch.project.project_sub-directory]
[IMB.CWKAGZ.DB]
[IMB.CWKAGZ.GRAPHICS]
```

The files contained in each project\_related sub-directories are listed as follows:

[IMB.CWKAGZ.DATA]	The directory structure for the project_related data (i.e. 92H4B01.DAT) and ASCII schema files (eg. 92H4B01.SCH). These 2 files are used for the DBase data base creation. The files are in an ASCII format, therefore they can be printed, edited or typed.
[IMB.CWKAGZ.DB]	The directory structure for the project_related DMRS data base entity files. These files cannot be typed, use the conversion routines to convert the DMRS data files to ASCII format. These files were only provided as a back up in case the schema or data files are lost.
[IMB.CWKAGZ.GRAPHICS]	The directory structure for all project_related IGDS input graphic design files. These files cannot be typed and are accessed only through a graphics software package.

## C. BACKUP TAPE LISTING

This section is the actual Input BACKUP tape listing for the tape(s) supplied to your branch.

## D. PROJECT SPREADSHEETS

This section lists all inputs for each project. Each spreadsheet indicates the project name, project code, a brief description of the project, and the total project size in blocks or mega bytes.

[IMB.LAVANI.DATA]92G2C01.DAT:2	14	27-FEB-1991 10:25
[IMB.LAVANI.DATA]92G2C01.SCH:2	3	27-FEB-1991 10:25
[IMB.LAVANI.DATA]92G2C02.DAT:2	19	27-FEB-1991 10:30
[IMB.LAVANI.DATA]92G2C02.SCH:2	4	27-FEB-1991 10:30
[IMB.LAVANI.DATA]92G2D01.DAT:4	10	27-FEB-1991 10:26
[IMB.LAVANI.DATA]92G2D01.SCH:2	2	27-FEB-1991 10:26
[IMB.LAVANI.DATA]92G2D02.DAT:4	14	27-FEB-1991 10:31
[IMB.LAVANI.DATA]92G2D02.SCH:2	3	27-FEB-1991 10:30

The spreadsheet columns are identified as follows:

MAP	Mapsheet or data base name
.EXT	The extension for the graphics file
THEME	Input theme description
GRAPHICS	Graphics Design file (size indicated by blocks or bytes)
DATA FILE	Total Size of the mapno##.SCH and mapno##.DAT file (listed by blocks and bytes)

Each project indicates the total for the Graphics and Data Files. *It should also be noted that any column that shows a "0" or is highlighted with a pattern has no information available for that column i.e. no graphics or data file.*

## E. EXAMPLES OF ASCII SCHEMA AND DATA FILES

This section give examples of the ASCII data and schema files for all major themes. The schema file (mapno.SCH) is used to define the structure for the data base you want to set up, whereas the data (mapno.DAT) is the actual coded theme information.

For simplicity, only the first 5 polygons of each theme were indicated for each data file. To help clarify these examples, titles were added to each schema file and column numbers to the data file.

## F. CONVERSION ROUTINES FOR CREATING THE ASCII SCHEMA AND DATA FILE

The following PC routines are used to create an ASCII schema file and ASCII data file for the themes noted below. The user must know the data base name, and the output theme number (or sub-theme) for each of your requests.

- CNV\_AG** This routine is used to convert the Agriculture data in the DMRS data base entity (i.e. 92H4B.E09). Based on the mapsheet 92H4B, the routine will output a 92H4B02.DAT and 92H4B02.SCH file for this request.
- CNV\_AP** This routine is used to convert the All Purpose Entity (APE) Sub-theme(s) in Entity 40 (eg. 82K1.E40). The user is prompted for the Sub-Theme number with the sub-theme numbers ranging from 50 to 78. In the case of a Sub-Theme 51, the routine will output a 82K151.DAT and 82K151.SCH file. Refer to the input file extensions listing under the project\_related graphics directory i.e. [WLD.PURCEL.GRAPHICS]82K1.G54 would indicated that the Sub-Theme is 54.
- CNV\_BIO** This routine is used to convert the Biogeoclimatic data in Entity 9 (i.e. 82K1.E09). The routine will produce a 82K104.DAT and 82K104.SCH output file.
- CNV\_PP** This routine is used to convert the Soils data in Entity 1 (i.e. 92H4B.E01). The routine will produce a 92H4B01.DAT and 92H4B01.SCH output file.
- CNV\_TER** This routine is used to convert the Terrain data in Entity 4 (i.e. 82K1.E04). Based on entering 82K1 for the data base name, the routine will produce a 82K103.DAT and 82K103.SCH output file.
- FWHCON** This routine is used to convert the Wildlife Habitat data in a Datatrieve file. For example, this routine will produce a 82K1.DAT and a 82K1.SCH output file. *Note, this is the only routine that does not add a theme number to the file name. This routine can only be run on a main frame computer that has Datatrieve. It should also be noted that this theme is the only data that has the polygon numbers left justified all other themes are right justified.*

All routines, with the exception of the FWHCON routine, have been developed to run on either a VAX main frame or a PC system. Separate routines have been developed for both types of systems. Each routine is initiated by keying in the routine name i.e. "R CNV\_AG" or "CNV\_AG" on a PC.

An example of how to initiate the routine and the corresponding prompts associated with the routine are listed below:

(i) \$ R CNV\_AG ..... Key in the routine name

Respond to the following prompt -

Enter database name: 92H4B ..... Key in the data base name

(ii) \$ R CNV\_AP ..... Key in the routine name

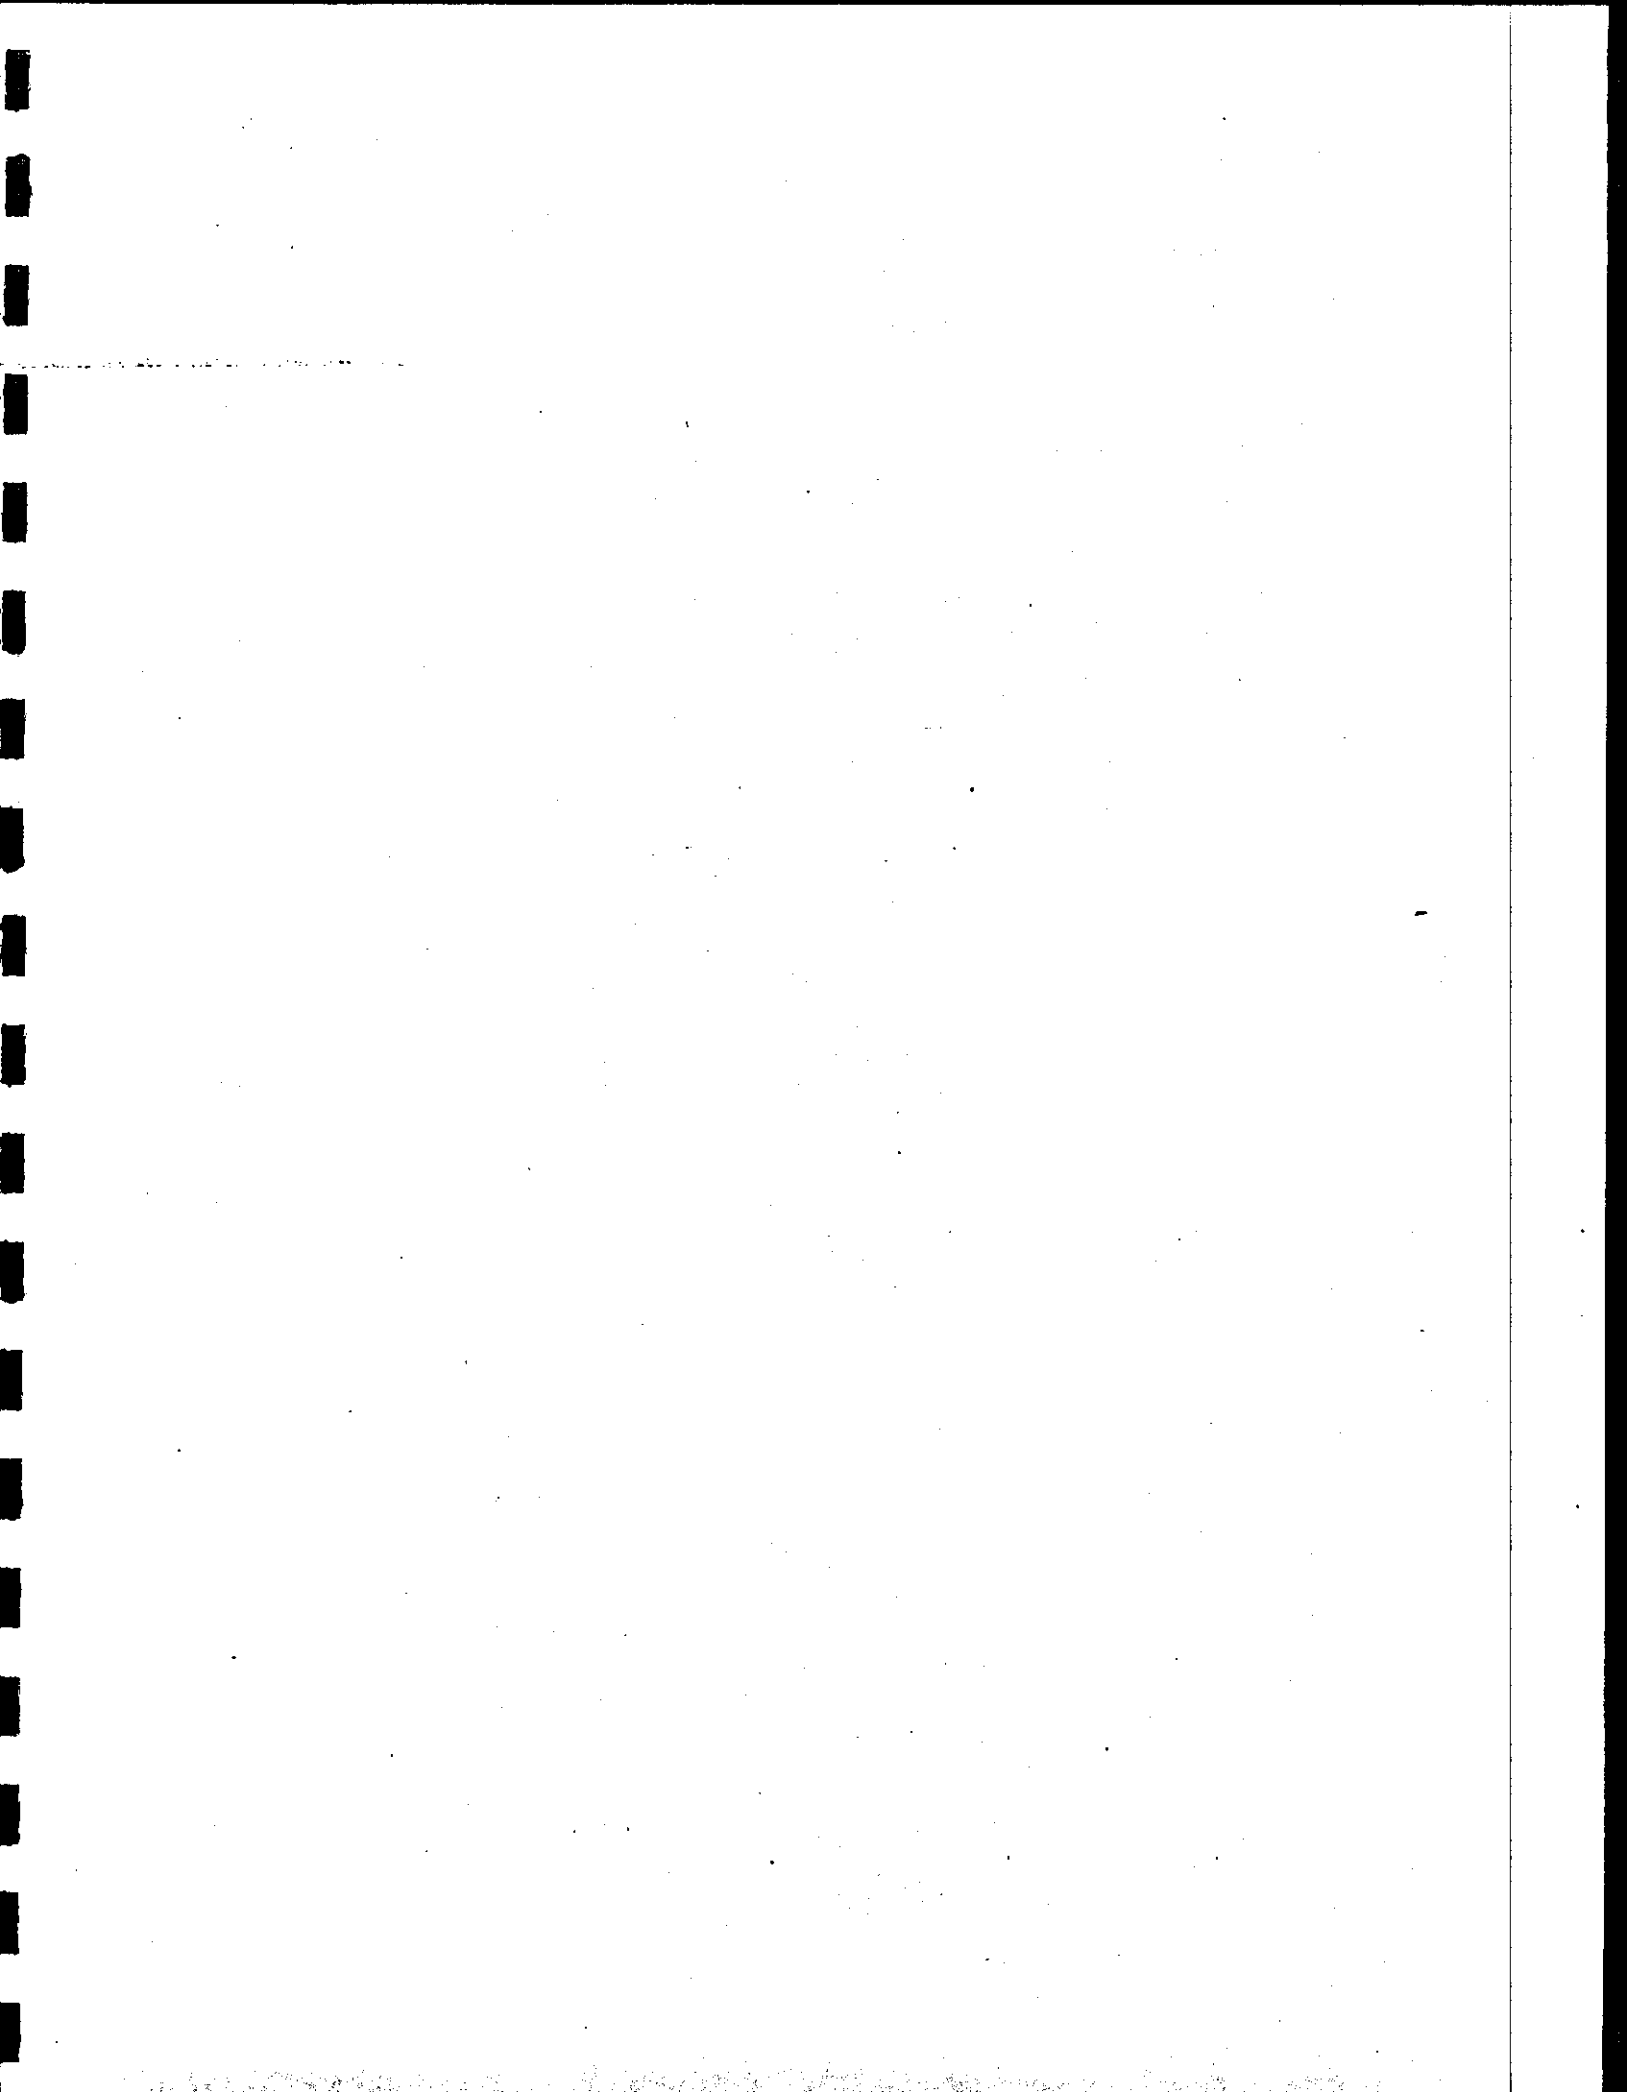

Respond to the following prompts -

Enter database name: 92H4B ..... Key in the data base name

Enter APE sub-theme: 54 ..... Key in the sub-theme number

## G. LIST OF PREVIOUS PROJECT RELATED ARCHIVE TAPES

The last section of this document, lists all previous Capamp Archiving and Indexing System (CAIS) project related tapes followed by a separate listing for project tapes that were not listed in the CAIS system. These tapes contain all files that were developed for each project. This would include all input, derivative, and output files as well as the associated routines and documentation. Also, this would include the final labelled output maps, the colour spool files as well as the associated reports.

## INTEGRATED MANAGEMENT BRANCH INPUT - Backup Tape Listing

.....

This is a BACKUP tape listing of the files contained on the tape labelled IMB,  
check the specification listed below for further details.

Each line, listed below, is identified as follows:

```
[IMB.BCACID.DATA]LRTAP51.DAT;1          1      18-MAR-1991 10:59

[IMB.BCACID.DATA] ..... ([Directory.Subdirectory.Subdirectory)
      LRTAP51.DAT;1 ..... (Filename.Extension.Version no.)
(Block Size for file) ..... 1
(Date/Time that the File was created) ..... 18-MAR-1991 10:59
```

.....

### Listing of save set(s)

```
Save set:          IMB.BCK
