TERRACE–HAZELTON FOREST RESOURCES STUDY

LAND CAPABILITY FOR WATERFOWL

3 PRIME CAPABILITY

Wetlands that have few limitations for waterfowl production or for use as migration staging or resting points. This is mainly a grouping of C.L.I. Classes 1,2, and 3.

4 MODERATE CAPABILITY

Wetlands that have moderate limitations for waterfowl production, mainly because of poor marsh edge and excessive water depth, but that are important on a local scale. This mainly includes C.L.I. Class 4.

5 LIMITED CAPABILITY

Wetlands that have moderately severe limitations for waterfowl production and that have low capability for migrational use. This mainly includes C.L.I. Class 5.

☐ VERY LOW CAPABILITY

Wetlands that have severe limitations for waterfowl production and that have very low or negligible capability for migrational use. This is mainly a grouping of C.L.I. Classes 6 and 7.

NOTE: Classification system is based on the Land Capability Analysis (L.C.A.) System For more detailed information refer to any published L.C.A. map (Peace River, Bulkley etc.)

Generalized from 1:250,000 manuscripts; for more detailed information, refer to original 1:50,000 and 1:250,000 manuscripts filed in the E.L.U.C. Secretariat Map Library.
