

Internet Explorer 7 Settings for IMF

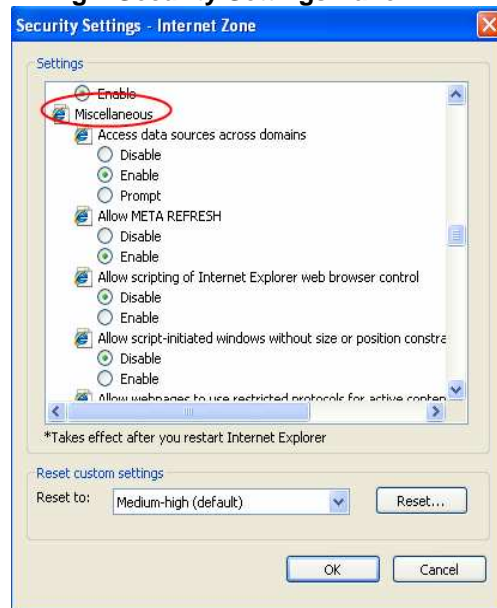

In order to properly use Internet Explorer 7 with IMF applications the following security settings will have to be adjusted.

1. Open the Internet Options panel by selecting **Tools | Internet Options** in the menu.
2. Open the Security Settings panel by selecting the **Security** tab and then select the **Custom Level...** button near the bottom of the panel.

3. Under the **Miscellaneous** section of the Security Settings panel, *Enable* the following items:

- Access data sources across domains
- Navigate sub-frames across domains

OPTIONAL: Adjusting the following settings will allow additional IMF functionality to be available ***these are not required.***

4. Under the **Scripting** section *Enable*:

- Allow status bar updates via script
