ORDER – WILDLIFE HABITAT AREA # 8-079

On being satisfied that the establishment of the wildlife habitat area dealt with in this order is necessary to meet the habitat requirements of the identified wildlife, and that the general wildlife measures dealt with in this order are necessary to maintain the identified wildlife within those areas, and under the authority of section 70 (1) (b) and (c), (2), (4), and (5) of the Operational and Site Planning Regulation, B.C. Reg. 107/98, the Deputy Minister of Water, Land and Air Protection orders that

1. the wildlife habitat area shown in the map set out in the attached Schedule A (#8-079) is established;
2. the wildlife habitat area referred to in section 1 is approved for Tailed frog (*Ascaphus truei*); and
3. the following practices are established as management practices that apply as general wildlife measures inside the wildlife habitat area, referred to in section 1:

Access

- Do not construct stream crossings, or roads within 30 m of stream, unless the regional environmental stewardship manager is satisfied there is no other practicable option and the variance is approved by the regional environmental stewardship manager. The location, type of crossing structure, mitigation measures during construction, short and long term sediment control of approved stream crossings and any associated roads must be designed and installed in a way that minimizes impacts to tailed frog instream and riparian habitats. Use temporary clear span bridges or alternatives that maintain tailed frog instream and riparian habitats. Minimize the length of road within the WHA.
- Rehabilitate sites with temporary access structures.

Silviculture

- Do not harvest in the core area.
- Use partial harvesting systems in the buffer that maintain 80% basal area unless variance is approved by the regional environmental stewardship manager. Partial harvest should be oriented towards the creation of old forest characteristics such as large diameter trees, multilayered canopies, snags and coarse woody debris.
- No salvage should be carried out unless variance is approved by the regional environmental stewardship manager.
- Minimize risk of windthrow (see Windthrow Handbook for B.C. Forests).
- Avoid the use of pesticides. Spot treatments with herbicides may be used in exceptional circumstances (e.g., noxious weeds) where it can be demonstrated that the herbicide will not be harmful to the species or habitat being managed.

Signed this 20 day of June, 2003

Gordon Macatee, Deputy Minister

Ministry of Water, Land and Air Protection
