Discover The Peace Region

The Peace region is a land waiting to be discovered.

Arrive in spring as the aspen woodlands come alive with the songs of migrant warblers. This is the season when grizzly bears, awake from their long winter's nap, roam the avalanche chutes in search of new greens, and stone sheep gather at mineral licks to replenish precious nutrients lost over the harsh winter months.

Linger through the long days of summer when sharp-tailed grouse raise their chicks in the grasslands east of the Rockies, where bison still roam and homesteaders built new lives by farming the land. While the air grows warm and still, the mountain meadows come alive with newly emerged butterflies.

Stay until fall when the alpine tundra turns to a Persian carpet of flaming reds and oranges, and the white-tailed ptarmigan changes its plumage from dull rock brown to stunning winter white. As autumn days draw in, the chilled morning air rings with the sounds of rutting deer, elk and caribou – the hunted quarry of the Sekanni and Beaver First Nations peoples.

Return in winter when a blanket of snow covers the land where dinosaurs roamed and rich coal beds and oil fields lie deep beneath the surface. This is the season when the boreal forests stand cold and snow-capped against an ice blue sky, and wolves and lynx track prey across a frozen and silent landscape.

Come explore the Peace region in all its seasons.

More Information

British Columbia Wildlife Watch is a multi-partner program designed to promote educational, recreational and commercial opportunities to view fish and wildlife in their natural habitats. Partners include government, communities and industry who treasure our wildlife heritage and want to protect it for future generations.

Stay Safe

- Do not approach, chase or touch wild animals. They are unpredictable and potentially dangerous.
- Bears can be seen throughout the region. Learn how to be safe in bear country. Information is available at wlap.gov.bc.ca/wild/pub/bearwild.htm
- Yield to bison. They are massive animals – up to 1,400 kg – and can run at speeds over 60 km/hr.
- Find out about hunting seasons in the areas you visit at wlap.gov.bc.ca/fw/wild/synopsis.htm.
- If your car is 2-wheel drive, use only paved or well-gravelled roads in the Peace region. High amounts of clay and the likelihood of precipitation, even in the summer, can make passage impossible.
- Wildlife may unexpectedly cross roads. Obey traffic speed limits to help avoid collisions.
- If using industrial roads, enquire about safe travel times and yield to heavy equipment.

Respect Others

- Be respectful of the rights of private property owners. Ask permission to cross private property and be sure to leave gates as you find them.
- Share the view with others trying to watch wildlife.
- You will likely encounter others undertaking industrial, commercial or other recreational activities. Please be aware and considerate of their activities.

Report all Poachers and Polluters

- There are laws to protect wildlife from harassment and disturbance. If you see something inappropriate, document the details and report it to the nearest conservation officer, local authority, or call: 1-877-952-7277.

Responsible Viewing

Respect the Needs of Wildlife

- Use responsible viewing practices. Avoid harasing wildlife, causing disturbances at feeding areas, damaging critical habitats or causing disturbances at breeding sites, which can leave eggs and young animals vulnerable to predation.
- While viewing or photographing wildlife, use viewing blinds, natural features or your car to minimize wildlife disturbance. View from a distance and use telephoto lenses, binoculars or spotting scopes. Watch animal behaviour for signs of disturbance or alarm. If this occurs, alter your behaviour.
- Never feed wildlife. It is unsafe, illegal and often leads to disaster for animals if they continue to seek human food sources.
- Avoid sensitive habitats (nests, dens, feeding areas) and times when wildlife are particularly vulnerable (denning, feeding, mating, raising young).
- Keep pets leashed and under control or leave them at home.

Protect the Environment

- Stay on designated roads, trails and viewing platforms wherever possible to avoid trampling vegetation, and so wildlife can become accustomed to human movement.
- Practice “no trace” viewing. Do not take plants, rocks, flowers or fossils as souvenirs. Please take your garbage with you or use appropriate facilities if they are provided.

Wildlife Viewing Tips

- The goal of wildlife viewing is to safely observe wildlife undertaking natural behaviour in their natural habitat.
- Use field guides to identify wildlife and signs, such as tracks, droppings, and nests.
- Use guides and local knowledge to enhance your viewing experience. Ensure your guide has a permit to conduct commercial wildlife viewing.
- Move slowly and quietly. Avoid wearing bright clothes.
- Early mornings and dusk are often best, but experiment with different viewing times. White-tailed deer are active in the late afternoon and early evening.
- Try different viewing strategies. Scan peaks with binoculars. Look for moose and bears in old burned or cleared areas where there is abundant shrub growth. Check for wildlife near lakes and wet areas, sources of food and cover.
- A diversity of species can be seen along edges between habitats.
- Be patient and remember there is no guarantee that you will see wildlife. If you do not, simply enjoy the natural beauty of northern B.C.

Viewing Highlights

- Pink Mountain – Look for plains bison, caribou and several species of arctic/alpine butterflies.
- Breeding warbler species that occur in B.C. are most abundant in this region.
- Approximately 4.5 million hectares of the Muskwa-Kechika Management Area lies within the Peace Region. This wilderness area, with minimal development, supports large mammals such as grizzly bears in globally important population densities.
- Dinosaur fossils and tracks await in Tumbler Ridge.
- Highway 29 – Fort St. John to Chetwynd. Use highway pullouts through the Peace River valley from which to view mule deer, moose, Canada geese, eagles and songbirds.
- Alaska Hwy – Tetsa River to Liard River. Look for wildlife in the Tetsa River valley. Caribou and stone sheep are attracted to mineral licks along the highway in Stone Mountain and Muncho Lake provincial parks (dawn and dusk).
- Liard River Hot Springs. Unique lake chub inhabit the warm water, and moose are attracted to the warm marsh areas (spring to fall). Wood bison may be seen along the highway north of the hot springs.

Wildlife Viewing Tips

- The goal of wildlife viewing is to safely observe wildlife undertaking natural behaviour in their natural habitat.
