Municipal Solid Waste Disposal in B.C. (1990-2024)

This indicator reports the estimated amount of municipal solid waste disposed per person for each regional district and for British Columbia. The per person disposal rate is an estimate of how many kilograms of solid waste each B.C. resident sends to a landfill or other disposal site (e.g., incinerators) in a given year.

- Approximately 2.7 million tonnes of municipal solid waste was disposed of in B.C. in 2024. While there has been an overall decreasing trend in municipal solid waste disposal rates since the 1990s, much of the waste disposed of could be reduced (by not being generated in the first place), repurposed, composted or recycled.
- Waste reduction efforts are more and more important as B.C. population continues to increase, landfills approach their capacity for receiving new waste, and the imperative to reduce greenhouse gas emissions from waste disposal grows.
- Tracking waste disposal across B.C. is important as it provides historical trend information and the current status of waste disposal—both of which inform and guide efforts to reduce the amount of waste we create.
- In 2024, British Columbians disposed of an average of 472 kg of municipal solid waste per person—the lowest disposal rate recorded, improving the previous lowest of 472 kg/person in 2024.
- Provincial initiatives which support decreases in waste disposal rates include the [CleanBC Plastics Action Plan](#), [organics diversion](#), [food waste prevention](#), [extended producer responsibility \(recycling\) programs](#), and [funding for organics infrastructure and collection](#).
- Variability in disposal rates from one region to the next is influenced by factors such as population density, economic activity, tourist and transient population fluctuations, distance to recycling markets, the role of various stewardship agencies operating in an area and the capacity and infrastructure in place in a region. While disposal rate data do not tell the whole story, they are useful in setting the stage for continuous improvement in waste management in B.C.

The charts below show the estimated per person weight of solid waste disposed of in 2024 for each regional district and the province as a whole, as well as a history of disposal rates for each region.

Municipal Solid Waste disposal rates in B.C. Regional Districts, 1990–2024

What is Included in Disposal Rate?

- Disposal rates reported here include waste from the residential sector, institutional, commercial, and light industrial sources as well as waste from construction, renovation, and demolition activities.
- Disposal rates do not include hazardous, biomedical, or agricultural waste, motor vehicles or components, heavy industry, or contaminated soil.
- Waste that is reused or recycled is also not included.

Interpreting the Data:

- 2024 disposal rates were provided by regional districts.
- Where no bar is shown on a chart for certain previous years, a verifiable estimate was not available.
- Historic disposal rates cannot be directly compared between years because the data were collected using different methods. However, the data from 2012 onward have been collected using the same methodology.
- Regional district population estimates are sourced from [BC Stats](#). As of 2024, population adjustments (e.g., for tourism) are no longer used.
- Disposal rates for Comox Valley and Strathcona are reported as one as they manage their waste streams [together](#).
- The current version of the disposal rates for some regional districts may differ from previous versions due to data improvements or correction by regional districts. The ministry keeps track of all the changes for future references.
- In 2024, the ministry updated its methodology to minimize assumptions and reduce the need for adjustments to disposal rates typically requested by regional districts. This approach supports the publication of more consistent baseline data with fewer revisions, assumptions and data modifications. Some significant changes between 2023 and 2024 data are due to this methodology change (e.g., Fraser Valley Regional District and Squamish-Lillooet Regional District).

Regional districts that wish to update the waste disposal data reported above should contact [the Environmental Policy and Initiatives Branch](#). Input from regional districts will also serve to inform future waste reporting methodology development.
