

NOTE:

1. Problems related to major channel dislocations, sediment deposition, bank erosion and debris jamming have been recorded in many areas of the Bella Coola River Valley since the early 1890's.
2. Limits of alluvial fans not included where topography is incomplete.

CACOHTIN CREEK ALLUVIAL FAN
Limits not defined (Topography incomplete)
See Air Photos BC 8240 No. 67 and 68

- Use and Limitations of Floodplain Maps**
- Users must note the dates of base mapping, aerial photography, river surveys and issue of mapping relevant to dates of development in the map area. Subsequent developments or changes within the floodplain, or channel (natural or constructed) will affect flood levels and render site-specific map information obsolete.
 - Floodplain maps are administrative tools which depict minimum flood elevations and floodplain boundaries. Flooding may occur outside of the designated floodplain boundary.
 - Floodplain maps do not provide information on site-specific flood hazards such as, land erosion or high water velocity, sudden shifts in the channel of the watercourse, or alluvial and debris flow fan areas.
 - Other sources of water, roads, railways or other barriers can restrict water flow and affect local flood levels. As well, obstructions such as ice and debris, flooding in surrounding areas, channel deposition, groundwater or other phenomena can cause flood levels to exceed those indicated on the map. Land adjacent to a floodplain may be subject to flooding from tributary watercourses.
 - Floodplain maps do not indicate or locate legal survey boundaries. A site survey is required to reconcile property location, ground elevations, and designated flood level information.
 - The accuracy of the location of a floodplain boundary as shown on this map is limited by the base topography. It is generally assumed to be plus or minus one-half the increment of the ground contours.
 - Professional assistance and detailed engineering analysis are required to address any of the above considerations.

NOTES		FLOODPLAIN DATA		LEGEND	KEY MAP	REVISIONS		ISSUE OF MAPPING		ENVIRONMENT CANADA ENvironnement Canada Eaux Interieures		BRITISH COLUMBIA MINISTRY OF ENVIRONMENT COlumbie-BRitannique Ministère de l'Environnement		CANADA BRITISH COLUMBIA FLOODPLAIN MAPPING AGREEMENT L'Accord Canada Colombie-Britannique sur la Cartographie des Plaines d'Inondation		FILE No.														
Produced by: British Columbia Water Management Branch, Special Projects Section, Floodplain Mapping Program.		1. The floodplain areas as depicted on this map have been interia designated pursuant to the Canada/British Columbia Floodplain Mapping Agreement (1989) by the Minister of the Environment for Canada and the Minister of Environment for British Columbia.				No.	DESCRIPTION	DATE	DATE SEPTEMBER 30, 1989	DRAWN T.C.E.	CHECKED P.D.	RIVER SURVEY B.R.S., M.P.	DESIGNED B.B.	ENGINEER R.W. 122	RECOMMENDED P. 122	APPROVED E. 122	91-2910-S.1													
Survey: River survey done by Survey Section, Water Management Branch, Survey Projects BIFDC-C and BIFDC-I, (1981 and 1984). a) Horizontal control based on provincial network. b) Elevations are in metres and are referred to Geodetic Survey of Canada datum. () indicates Survey Monument.		2. Flooding may still occur outside of the interia designated floodplain areas. The Ministers do not assume any liability by reason of the interia designation or failure to interia designate areas on this map.															N.T.S. MAP No.													
Mapping: Base mapping done by Map Production Division, Survey and Resource Mapping Branch, Project 83-1011, (1983). a) Contour interval 2 metre and greater; spot elevations shown to 0.1 metres, with accuracy to ± 0.6 metres, except where noted. b) Grid origin referred to U.T.M. Projection Zone 9.		3. The flood levels were computed using a standard step method modelling technique, assuming open water flow conditions.															930/7.8													
		4. The floodplain limits assume the absence of all dykes.															SCALE													
		5. The floodplain limits and flood levels include an allowance for freeboard.															1:5 000													
		6. The floodplain limits are not established on the ground by legal survey.															NEGATIVE No.													
		7. The floodplain limits are not delineated for side streams and tributaries.															268990													
		8. The required setback of buildings from the natural boundaries of lakes and watercourses to allow for the passage of floodwaters and possible bank erosion is not shown. This information is available either through local municipalities or the Ministry of Environment.															DRAWING No. REV.													
		9. MAPS AVAILABLE FROM THE MINISTRY OF CROWN LANDS, SURVEYS AND RESOURCE MAPPING BRANCH, MAPS B.C., MAP AND AIR PHOTO SALES, VICTORIA, B.C.															87-56-8
