

NOTES Produced by: British Columbia Water Management Division, Hydrology Branch, Flood Identification Section. River survey done by: Water Management Division, Hydrology Branch, Technical Support Section, Project 85-10 F810. Mapping: Base mapping done by Lands Services Division, Survey and Resource Mapping Branch, (SRMB) Topo/GS Section, Project 85-10 F810, dated 8/8/89, NAD 83, Air photography July, 1981. a) Contour interval 1 metre and greater; with spot elevations shown to 0.1 metres, with a specified accuracy of 0.3 metres, except where noted. Contact SRMB for further details on base mapping specifications. b) Grid origin refers to U.T.M. Projection Zone 11.		FLOODPLAIN DATA 1. The floodplain areas as depicted on this map have been designated pursuant to the Canada/British Columbia Floodplain Mapping Agreement (1988) by the Minister of the Environment for Canada and the Minister of Environment, Lands & Parks for British Columbia. Floodings may still occur outside of the designated floodplain areas. The Ministers do not assume any liability by reason of the designation or failure to designate areas on this map. 2. The Designated Flood has a statistical frequency of occurrence of once every 200 years. 3. The flood levels were computed using a standard step method modelling technique, assuming open water flow conditions. 4. The floodplain limits assume the absence of all dykes. 5. The floodplain limits and flood levels include an allowance for freeboard. 6. The floodplain limits are not established on the ground by legal survey. 7. The floodplain limits are not delineated for side streams and tributaries. 8. The required setback of buildings from the natural boundaries of lakes and watercourses to allow for the passage of floodwaters and possible bank erosion is not shown. This information is available either through local municipalities or the Ministry of Environment, Lands & Parks. 9.
