Survey: River survey done by Surveys Section, Water Management Branch, Project 85 RPP-9 (1989).		2. The flood levels were computed using a standard step method modelling technique, assuming open water flow conditions.																3. The floodplains are not delineated for side streams and tributaries, except as noted.		4. The required setback of buildings from the natural boundaries of lakes and watercourses to allow for the passage of floodwaters and possible bank erosion is not shown. This information is available either through local municipalities or the Ministry of Environment.		5.
