

NOTES	
Produced by; British Columbia Water Management Branch, Special Projects Section Floodplain Mapping Program.	
Survey; River survey done by Surveys Section, Project No. 84 RPP7, March 1984, Water Management Branch.	a) Horizontal control based on provincial network. b) Elevation are in metres and are referred to Geodetic Survey of Canada datum. (● Indicates Survey Monument)
Mapping; Base mapping done by Map Production Division, Surveys and Resource Mapping Branch, Project No. 77-24-T-0. a) Contour interval - 10 metre and greater; spot elevations shown to 0.1 metres, with accuracy to ± 0.3 metres, except where noted. b) Grid origin referred to U.T.M. Projection Zone 10.	c) The Designated Flood has a statistical frequency of occurrence of once every 200 years. d) Flood levels were computed using a standard step method modelling technique, assuming open water flow conditions. e) Floodplain limits assume the absence of all dykes. f) Floodplain limits and flood levels include allowance for freeboard. g) Position of floodplain limits not established on the ground by legal survey. h) Floodplain limits are not delineated for side streams and tributaries. i) Required setback of buildings from the natural boundaries of lakes and watercourses to allow for the passage of floodwaters and possible bank erosion are not shown. This information is available either through local municipalities or the Ministry of Environment.

FLOODPLAIN DATA	
a) The Designated Flood has a statistical frequency of occurrence of once every 200 years. b) Flood levels were computed using a standard step method modelling technique, assuming open water flow conditions. c) Floodplain limits assume the absence of all dykes. d) Floodplain limits and flood levels include allowance for freeboard. e) Position of floodplain limits not established on the ground by legal survey. f) Floodplain limits are not delineated for side streams and tributaries. g) Required setback of buildings from the natural boundaries of lakes and watercourses to allow for the passage of floodwaters and possible bank erosion are not shown. This information is available either through local municipalities or the Ministry of Environment.
